Grade	**0.00** out of 100.00

Question **1**

Not answered

Marked out of 1.00

Flag question

The major source of values in one's superego, according to psychoanalytic theory, is

Select one:

- Parental ideals
- Social models such as celebrities
- Innate values in newborn
- Knowledge from school education
- Peer group

Explanation:

Freud viewed the superego as the heir to the Oedipus complex. After resolving the oedipal conflict, a more mature form of anxiety occurs, often termed 'superego anxiety'. This latency-age concern involves the fear that internalised parental representations, contained in the superego, will cease to love, or will angrily punish, the child. Children internalise parental values at about the age of 5 or 6. The superego then serves as an agency that provides ongoing scrutiny of a person's behaviour, thoughts, and feelings.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. pp. 1064-1065.

The correct answer is: Parental ideals

Question **2**

Not answered

Marked out of 1.00

Flag question

Carl Gustav Jung is associated with which of the following terms?

Select one:

- Free association
- Personal unconscious
- Neurasthenia
- Dementia praecox
- Moral insanity

Carl Gustav Jung is associated with the following terms- Personal unconscious, collective unconscious, introvert, extrovert, archetypes, persona, anima and animus.

The correct answer is: Personal unconscious

Question **3**

Not answered

Marked out of 1.00

Flag question

Which of the defence mechanisms is most often used by people with narcissistic personality?

Select one:

- Displacement
- Projective identification
- Sublimation
- Reaction formation
- Projection

Explanation:

Projection is a primitive or immature defense mechanism that involves attributing one's own internal unacceptable ideas and impulses to an external target, such as another individual, and reacting accordingly to them. It includes severe prejudice, rejection of intimacy through suspiciousness, hypervigilance to external danger, and injustice collecting.

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. p. 892.

Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1066.

The correct answer is: Projection

Question **4**

Not answered

Marked out of 1.00

Flag question

Klein's depressive position is related to the process of learning to cope with which of the following conflicts?

Select one:

- Difficult relationships
- Ambivalence
- Sexual needs
- Depression
- Hunger

Explanation:

Through her study of early life and children's play, Melanie Klein proposed that **aggressive** and **destructive forces** were central components of early development.

- **Paranoid-schizoid position**: infants' mode of organising experience in which all aspects of infant and mother are **split** into **good and bad elements (idealized or denigrated)**
- **Depressive position:** once able to **integrate** good and bad, infants become concerned

that they may have harmed or destroyed the mother through hostile and sadistic fantasies;

the mother is viewed **ambivalently** as having both positive and negative aspects, and as

the target of a mixture of loving and hateful feelings

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1083.

The correct answer is: Ambivalence

Question **5**

Not answered

Marked out of 1.00

Flag question

Superego is formed at which stage of psychosexual development?

Select one:

- Phallic stage
- Oral stage
- Genital stage
- Anal stage
- Latency stage

Explanation:

The latency stage is the stage of relative instinctual quiescence or inactivity of sexual drive during the period from the resolution of the Oedipus complex until pubescence (from about 5-6 years until about 11-13 years). Freud viewed the superego as the heir to the Oedipus complex. Children internalise parental values at about the age of 5 or 6. The superego then serves as an agency that provides ongoing scrutiny of a person's behaviour, thoughts, and feelings.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. pp. 1063-1064.

The correct answer is: Latency stage

Question **6**

Not answered

Marked out of 1.00

Flag question

Which of the following is correct concerning defence mechanisms employed by the ego?

Select one:

- Defenses operate only in pathological situations
- All defences lead to complete resolution of anxiety
- Repression is considered as the primary defence
- Acting out is a mature defence
- Immature defences are characteristic of psychosis

Explanation:

Freud conceived the idea of repression acting as a defence to prevent unacceptable thoughts from reaching conscious awareness. Subsequently, other defence mechanisms were

described, viewed as developing to prevent conflict between the conscious mind and unconscious desires and developing in the course of normal maturation.

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. p. 891.

The correct answer is: Repression is considered as the primary defence

Question **7**

Not answered

Marked out of 1.00

Flag question

Which one among the following is considered as a mature defence mechanism?

Select one:

- Projection
- Sublimation
- Denial
- Regression
- Repression

Explanation:

Primitive defence mechanisms include denial, projection, and regression. Repression is a neurotic defence mechanism. Sublimation is a mature defence mechanism.

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. pp. 892-893.

The correct answer is: Sublimation

Question **8**

Not answered

Marked out of 1.00

Flag question

In psychoanalytic terms, condensation refers to

Select one:

- Representing abstract concepts by using recognisable images
- Combining various unconscious impulses into a single image while dreaming
- Avoidance of unconscious impulses
- Enacting dreams as they occur
- Transfer of energy from an original object to a symbolic representation of the object

Explanation:

Condensation is the mechanism by which several unconscious wishes, impulses, or attitudes can be combined into a single image in the manifest dream content. Thus, in a child's nightmare, an attacking monster may come to represent not only the dreamer's father but may also represent some aspect of the mother and even some of the child's primitive hostile impulses as well.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1059.

The correct answer is: Combining various unconscious impulses into a single image while dreaming

Question **9**

Not answered

Marked out of 1.00

Flag question

The basis of object relations theory is that the primary motivational drive of an individual is to seek

Select one:

- Self actualisation
- Money
- Satisfaction
- Relationships
- Pleasure

Explanation:

In the mid-twentieth century, Winnicott, Klein, Fairbairn, and others developed the object relations theory, which emphasized the importance of relationships, rather than drives such as sexuality and aggression, in affecting the mind.

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. p. 896.

The correct answer is: Relationships

Question **10**

Not answered

Marked out of 1.00

Flag question

Defence mechanisms are a function of the

Select one:

- Ego
- Id
- Both id and ego
- Superego
- Both ego and superego

Explanation:

Defence mechanisms reside in the unconscious domain of the ego. At each phase of libidinal development, specific drive components evoke characteristic ego defences. Defences can be grouped hierarchically according to the relative degree of maturity associated with them. Although Freud recognised the importance of unconscious defences in response to anxiety, the first systemic account of these mechanisms was written by Freud's daughter, Anna, in *The Ego and the Mechanisms of Defence* in 1936.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. pp. 1064-1065.

Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. p. 888.

The correct answer is: Ego

Question **11**

Not answered

Marked out of 1.00

Flag question

A young man brings his 19-year-old girl friend who vacantly stares at the wall, not responding to the conversation. He reports that she started behaving in this manner since they had a serious argument. The most likely defence mechanism operating here is

Select one:

- Acting out
- Repression
- Projection
- Dissociation
- Displacement

Explanation:

Dissociation is a temporary but drastic modification of character or sense of personal identity to avoid emotional distress. It includes fugue states and conversion reactions.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1067.

The correct answer is: Dissociation

Question **12**

Not answered

Marked out of 1.00

Flag question

According to Freud which of the following is true?

Select one:

- Transference is not seen in the absence of repressed wishes
- Id obeys the reality principle
- Phallic phase is the last phase in psychosexual development
- Id functions through primary process thinking
- Conscious, subconscious and preconscious form structural model of mind

Explanation:

Freud used the term ‘id’ to refer to a reservoir of unorganised instinctual drives. Operating under the domination of the primary process, the id cannot delay or modify instinctual drives with which an infant is born.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1064.

The correct answer is: Id functions through primary process thinking

Question **13**

Not answered

One person (A) projects undesirable impulses and feelings onto another person (B), then B unconsciously alters her behavior in a way as if the projected idea was true. The underlying

Marked out of 1.00

Flag question

psychodynamic mechanism is

Select one:

- Projective identification
- Acting out
- Suppression
- Repression
- Projection

Explanation:

Projective identification involves behaving towards another in a manner that causes them to take on one's own internal unacceptable ideas and impulses. It should not be confused with projection. Whereas during projection an individual with a certain emotion might perceive someone else as feeling the same way, in projective identification the individual causes the other to feel that emotion (e.g. an angry child behaves in such a way that his mother becomes angry with him).

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. p. 892.

The correct answer is: Projective identification

Question **14**

Not answered

Marked out of 1.00

Flag question

Oedipus complex and castration anxiety are associated with which stages of psychosexual development?

Select one:

- Anal stage
- Genital stage
- Latency stage
- Oral stage
- Phallic stage

Explanation:

The phallic stage begins sometime during year 3 and continues until approximately the end of year 5. Threats of castration and the related anxiety are connected with guilt over masturbation and oedipal wishes. During this phase oedipal involvement and conflict are established and consolidated.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1062.

The correct answer is: Phallic stage

Question **15**

Not answered

A 45-year-old man who has longstanding suspiciousness towards police becomes anxious and acts in a strange manner on seeing 2 policemen at a public event. The police become suspicious of him and arrest him as a precautionary measure. The underlying

Marked out of 1.00

Flag question

psychodynamic mechanism is

Select one:

- Repression
- Acting out
- Projective identification
- Suppression
- Projection

Explanation:

Projective identification involves behaving towards another in a manner that causes them to take one's on own internal unacceptable ideas and impulses. It should not be confused with projection. Whereas during projection an individual with a certain emotion might perceive someone else as feeling the same way, in projective identification the individual causes the other to feel that emotion (e.g. an angry child behaves in such a way that his mother becomes angry with him).

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. p. 892.

The correct answer is: Projective identification

Question **16**

Not answered

Marked out of 1.00

Flag question

Who coined the term 'collective unconscious'?

Select one:

- Freud
- Mahler
- Adler
- Jung
- Lacan

Explanation:

Carl Gustav Jung, a Swiss psychiatrist, formed a psychoanalytic school known as 'analytic psychology', that includes basic ideas related to, but going beyond, Freud's theories. Jung expanded on Freud's concept of the unconscious by describing the 'collective unconscious' as consisting of all humankind's common, shared mythological and symbolic past. The collective unconscious includes 'archetypes' – representational images and configurations with universal symbolic meanings.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1082.

The correct answer is: Jung

Question **17**

Which of the following defence mechanism is classified as a manic defence?

Not answered

Marked out of 1.00

Flag question

Select one:

- Repression
- Sublimation
- Reparation
- Humor
- Denial

Explanation:

The psychotic denial of external reality, unlike repression, affects perception of external reality more than perception of internal reality. Seeing, but refusing to acknowledge what one sees, or hearing and negating what is actually heard are examples of denial. At the psychotic level, the denied reality may be replaced by a fantasy or delusion.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1066.

The correct answer is: Denial

Question **18**

Not answered

Marked out of 1.00

Flag question

In his lifetime, Freud proposed various theories with many revisions of his former theories being evident in his later works. The terms superego, id and ego are based on

Select one:

- Dream work model
- Cathartic model
- Topographical model
- Structural model
- Hysterical model

Explanation:

In the structural model, an infant's mind comprised the id ('the it' that wishes to pursue its own desires, regardless of the constraints of morality or external reality) which is entirely unconscious. As development occurs, the mind further differentiates into the ego and then the superego.

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. p. 890.

The correct answer is: Structural model

Question **19**

Not answered

Marked out of 1.00

Flag

Idealization and denigration are products of which of the following Kleinian processes?

Select one:

- Regression
- Splitting

question

- Repression
- Projective identification
- Projection

Explanation:

Through her study of early life and children's play, Melanie Klein proposed that **aggressive** and **destructive forces** were central components of early development.

- **Paranoid-schizoid position**: infants' mode of organising experience in which all aspects of infant and mother are **split** into **good and bad elements (idealized or denigrated)**
- **Depressive position:** once able to **integrate** good and bad, infants become concerned that they may have harmed or destroyed the mother through hostile and sadistic fantasies; the mother is viewed **ambivalently** as having both positive and negative aspects, and as the target of a mixture of loving and hateful feelings

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1083.

The correct answer is: Splitting

Question **20**

Not answered

Marked out of 1.00

Flag question

Which of the following is a Kleinian defence?

Select one:

- Splitting
- Omnipotence
- Projection
- Grandiosity
- All of the listed options

Explanation:

Melanie Klein emphasized primitive defense mechanism such as projection/projective identification, introjection, and splitting. Denial, omnipotence, and grandiosity are also considered Kleinian defences. SIPDOG is a mnemonic for Klein's defences: Splitting, Introjection, Projective Identification, Denial, Omnipotence, Grandiosity.

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. p. 888.

The correct answer is: All of the listed options

Question **21**

Not answered

The most mature level of anxiety according to psychoanalytic theory is

Select one:

Marked out of 1.00

Flag question

- Disintegration anxiety
- Superego anxiety
- Annihilation anxiety
- Castration anxiety
- Separation anxiety

Explanation:

After resolving the oedipal conflict, a more mature form of anxiety occurs, often termed ‘superego anxiety’. This latency-age concern involves the fear that internalised parental representations, contained in the superego, will cease to love, or will angrily punish, the child.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1065.

The correct answer is: Superego anxiety

Question **22**

Not answered

Marked out of 1.00

Flag question

After his father's sudden death, Tom took over his family business, which he used to detest for a long time. The defence mechanism in operation is

Select one:

- Reaction formation
- Displacement
- Repression
- Altruism
- Regression

Explanation:

Reaction formation involves externally expressing attitudes and behaviours that are the opposite of the unacceptable internal impulses (e.g. being extra polite to a person to avoid expressing anger towards them).

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. p. 893.

The correct answer is: Reaction formation

Question **23**

Not answered

Marked out of 1.00

Flag question

Which of the following defence mechanism is characterised by changing the shape of one's self-representation to become more like an ideal and admired person?

Select one:

- Introjection
- Identification
- Modelling
-

Projection

Displacement

Explanation:

Identification involves taking on the characteristics, feelings, and/or behaviours of someone else as one's own. It differs from introjection in a similar manner to the way projective identification differs from projection. Whereas in introjection one may perceive themselves as being like someone else, in identification one may actually feel the same way someone else does and become more like the other person.

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. pp. 892-893.

The correct answer is: Identification

Question **24**

Not answered

Marked out of 1.00

Flag question

Which one among the following statements about dream work is true?

Select one:

- Primary process thinking does not occur in dreaming
- The mental mechanisms involved in the psychoanalytic therapy of dreams include primary elaboration
- The dream work involves a conversion of latent content into manifest content
- Dream work converts the manifest content of the dream into its latent content
- Dreams are always interpreted in psychoanalytic psychotherapy

Explanation:

Freud distinguished between two layers of dream content. The 'manifest' content refers to what is recalled by the dreamer; the 'latent' content involves the unconscious thoughts and wishes that threaten to awaken the dreamer. Freud described the unconscious mental operations by which latent dream content is transformed into the manifest dream as the 'dream work'.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1059.

The correct answer is: The dream work involves a conversion of latent content into manifest content

Question **25**

Not answered

Marked out of 1.00

Flag question

A GP, who had an argument with her teenage daughter the previous night, insists with excessive force that her next patient stop smoking. This is called

Select one:

- Projection
- Reaction formation
- Denial
- Displacement

- Acting out

Explanation:

Displacement is the process by which interest and/or emotion is shifted from one object onto another less threatening one. For example, the person who is having problems at work may displace the anger felt for their boss onto their family by displaying irritability and moodiness at home.

Ref: Casey P, Kelly B. Fish's clinical pathology: Signs and symptoms in psychiatry, 4th Edition. 2019. p. 129.

The correct answer is: Displacement

Question **26**

Not answered

Marked out of 1.00

Flag question

Which one of the following is true about the ego?

Select one:

- It is unconsciously motivated
- It is instinctive
- It is governed by the pleasure principle
- It is governed by the reality principle
- It is the most primitive part of the personality

Explanation:

The ego spans all three topographical dimensions of conscious, preconscious, and unconscious. The ego – the executive organ of the psyche – controls motility, perception, contact with reality, and, through the defense mechanisms available to it, the delay and modulation of drive expression. As the ego brings influences from the external world to bear on the id, it simultaneously substitutes the reality principle for the pleasure principle.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1064.

The correct answer is: It is governed by the reality principle

Question **27**

Not answered

Marked out of 1.00

Flag question

Which one of the following concepts is not correctly linked to its proponent?

Select one:

- Splitting - Melanie Klein
- Malignant Alienation - Morgan and Watts
- Introversion and Extroversion - Donald Winnicott
- Sibling Rivalry - Alfred Adler
- Thanatos - Sigmund Freud

Explanation:

Carl Jung described 16 personality types, including the differentiation between 'introverted' and 'extroverted' types. Donald Winnicott described the 'transitional object' and the 'good-enough mother'.

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. p. 888.

The correct answer is: Introversion and Extroversion - Donald Winnicott

Question **28**

Not answered

Marked out of 1.00

Flag question

Following poor feedback from his boss at work, Mark spends all his evening playing tennis with his friend. This is best described as

Select one:

- Displacement
- Altruism
- Turning into self
- Aggression
- Sublimation

Explanation:

Sublimation is a mature defence mechanism that involves expressing unacceptable internal impulses in socially acceptable ways.

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. p. 893.

The correct answer is: Sublimation

Question **29**

Not answered

Marked out of 1.00

Flag question

The predominant defence noted in those with amnesic fugue reactions is

Select one:

- Dissociation
- Splitting
- Somatisation
- Introjection
- Acting out

Explanation:

Dissociation is a temporary but drastic modification of character or sense of personal identity to avoid emotional distress. It includes fugue states and conversion reactions.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1067.

The correct answer is: Dissociation

Question **30**

Not answered

Marked out of 1.00

Flag question

In a psychoanalytic group setting, a male group member is noted to make advances towards women both inside and outside the group whenever his self-esteem was low, but did not show sustained interest when he started feeling better within himself. This led to many broken relationships. Which of the following defence mechanism is being used?

Select one:

- Reaction formation
- Isolation
- Sublimation
- Displacement
- Acting out

Explanation:

In acting out, patients directly express unconscious wishes or conflicts through action to avoid being conscious of either the accompanying idea or the affect. Tantrums, apparently motiveless assaults, and pleasureless promiscuity are typical examples.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 577.

The correct answer is: Acting out

Question **31**

Not answered

Marked out of 1.00

Flag question

Which of the following is NOT a Kleinian defence?

Select one:

- Denial
- Sublimation
- Grandiosity
- Introjection
- Projective identification

Explanation:

Melanie Klein emphasized primitive defense mechanisms such as projection/projective identification, introjection, and splitting. Sublimation is a mature defence mechanism that involves expressing unacceptable internal impulses in socially acceptable ways.

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. pp. 888, 893.

The correct answer is: Sublimation

Question **32**

Not answered

Marked out of

Which of the following was employed by Freud as a psychoanalytic technique to uncover the unconscious?

1.00

Flag question

Select one:

- Free association
- Empathy
- Narco-analysis
- Cognitive restructuring
- Introspection

Explanation:

Freud developed the technique of free association, where the patient is encouraged to say whatever comes to mind. As patients attempt to free associate, they soon learn that they have difficulty saying whatever comes to mind without censoring specific thoughts. All the original wishes, drives, and defences associated with the infantile neurosis may be transferred to the person of the analyst.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1069.

The correct answer is: Free association

Question **33**

Not answered

Marked out of 1.00

Flag question

Who described the unconscious as composed of both the collective unconscious and personal unconscious?

Select one:

- Donald Winnicott
- Carl Gustav Jung
- Sigmund Freud
- Alfred Adler
- Anna Freud

Explanation:

Carl Gustav Jung, a Swiss psychiatrist, formed a psychoanalytic school known as ‘analytic psychology’, that includes basic ideas related to, but going beyond, Freud’s theories. Jung expanded on Freud’s concept of the unconscious by describing the ‘collective unconscious’ as consisting of all humankind’s common, shared mythological and symbolic past. The collective unconscious includes ‘archetypes’ – representational images and configurations with universal symbolic meanings.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1082.

The correct answer is: Carl Gustav Jung

Question **34**

Not answered

Marked out of

The 'repressive barrier' to censor unacceptable wishes and desires is maintained by the

Select one:

1.00

Flag question

Superego

- Preconscious system
- Unconscious system
- Id
- Conscious system

Explanation:

The preconscious interfaces with both unconscious and conscious regions of the mind. The preconscious system serves to maintain the repressive barrier and to censor unacceptable wishes and desires.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1060.

The correct answer is: Preconscious system

Question **35**

Not answered

Marked out of 1.00

Flag question

In psychodynamic theory, an active process in which painful thoughts and memories are pushed to the inaccessible corners of the mind is known as

Select one:

- Repression
- Retrieval failure
- Regression
- False memory syndrome
- Re-integration

Explanation:

Repression is characterised by preventing unacceptable aspects of internal reality from coming to conscious attention. (For example, a victim of childhood abuse may not have conscious awareness of the abuse as an adult.) The associated emotional reaction may remain in the conscious mind but divorced from its accompanying memory.

Ref: Semple D, Smyth R. Oxford handbook of psychiatry. Oxford university press; 2019 Jul 30. p. 892.

The correct answer is: Repression

Question **36**

Not answered

Marked out of 1.00

Flag question

Which one of the following is not considered to be a neo-Freudian?

Select one:

- Karen Horney
- Harry Stack Sullivan
- Jean Piaget
- Erich Fromm

- Alfred Adler

Neo-Freudian psychologists were thinkers who agreed with the basis of Freud's psychoanalytic theory but changed and adapted the theory to incorporate their own beliefs, ideas and theories. Piaget is not usually considered as a Freudian theorist. (Retrieved from http://psychology.about.com/od/psychoanalytictheories/f/neo-freudian.htm)

The correct answer is: Jean Piaget

Question **37**

Not answered

Marked out of 1.00

Flag question

Which one of the following refers to the contents of the collective unconscious that describes a pan-cultural representation of human experience expressed through images and symbols?

Select one:

- Animus
- Shadow
- Archetypes
- Anima
- Persona

Explanation:

Carl Gustav Jung, a Swiss psychiatrist, formed a psychoanalytic school known as 'analytic psychology', that includes basic ideas related to, but going beyond, Freud's theories. Jung expanded on Freud's concept of the unconscious by describing the 'collective unconscious' as consisting of all humankind's common, shared mythological and symbolic past. The collective unconscious includes 'archetypes' – representational images and configurations with universal symbolic meanings.

Ref: Boland R, Verduin M. Kaplan and Sadock's Synopsis of Psychiatry, 12th Edition. 2022. p. 1082.

The correct answer is: Archetypes
